SE 305 – SOFTWARE SPECIFICATION AND DESIGN

PROJECT PROPOSAL

Project Name: Mobile Tourists

Group Members: Sıla TEKCAN, Özgür Burak BULUT, Erşen PAMUK, Utku DURMUŞ

Client: Ozikizler Tourism – Özer Bür

Project Subject:

Many problems can occur while traveling. For instance; missing the bus, getting lost in the city, misunderstandings etc. In order to minimize these problems, we will build a trip planning system application for customers of Ozikizler Tourism. This application will act as an artificial intelligence guide.

Users will register on the application with their personal information. This application will store users' data. Users will be able to see the tours in the application as a list and participate in these tours. The application will show all the contents of the tour like; arrival points, departure time, places to visit, landmarks etc. Users will be notified of their tour-related problems to the tour guide through the application. This application will facilitate the communication between the tour guide and the customers.
